

Molecular Guide

A GPS/GOS system for health

A cutting edge approach to the most efficient health path

Step 1

Molecular Guide recommends appropriate molecular tests based on history and previous/current test results

Step 2

Reviews results and recommends additional tests tailored to your biology

Step 3

Uses Computational Molecular Tools to connect the thousands of dots

Step 4

Identifies which food, herbs, supplement and medication may be a fit for your biology

Predicts future health issues and identifies tailored prevention measures

Step 4

MG Recommends a plan which is then taken to your clinician and clinician approves or modifies the plan

- Clinician and MG collaborate
- MG may also recommend clinicians familiar with your pattern.

Step 5

Retest to see if biology is going in the right direction
